

LINER/SHINER™

TM

Liner/Shiner™ is here to help!

Ok, So what is **Liner/Shiner™** and what does it do?

Liner/Shiner™ is truly a unique breakthrough product designed to restore the luster, beauty, and original look to a worn out and faded looking truck bed liner. More importantly, with its excellent wear resistance, **Liner/Shiner™** will protect these liners from mild acids, solvents, and other harmful substances, while resisting chalking and color changes that are commonplace. It can also be applied to a newly sprayed bedliner and provide protection from the UV rays day one!

You're probably wondering what makes **Liner/Shiner™** so special and how exactly does it work?

Liner/Shiner™ is comprised of a special **single component water-based aliphatic Polyurea** composition specifically formulated to absorb, harden, and protect the bedliner. Most other competitive products are simply oily mists that evaporate after a few days following the application. They lose their brightness, color, and protective qualities and often need to be retreated before the week is out. Some even contain silicon which can be very slippery and dangerous. **Liner/Shiner™**, with its special strength formulation, experiences

NONE OF THESE PROBLEMS.

Since it has low VOC's, **Liner/Shiner™** is also environmentally friendly. It actually forms a continuous nonporous film on the bedliner which can protect for years. With its fast curing properties, **Liner/Shiner™** can also be applied in about 30 minutes or less during suitable weather conditions. Call **Gia's Mobile Detailing at 631.473.1217** and try **Liner/Shiner™** today!!
